Javascript String concatenation Practice:

◆ Task 1: Create a Full Address

Instruction:
Ask the user to enter their street, city, and country. Concatenate these values into one full address string and display it like:

`"Your full address is: 123 Main St, Springfield, USA"`

◆ Task 2: Make a Custom Username

Instruction:
Ask the user to input their first name and a favorite number. Concatenate them to create a simple username like:

`"john42"`

Display the result with a message: `"Your new username is: john42"`

◆ Task 3: Email Generator

Instruction:
Ask the user for their first name and last name. Combine them into an email address format like:

`"firstname.lastname@example.com"`
Show the result.

◆ Task 4: Combine Favorite Things

Instruction:
Ask the user for their favorite color, animal, and food. Create a sentence like:

`"Your favorite things are: blue dogs and pizza!"`

◆ Task 5: Quote with Author

Instruction:

Ask the user for a quote and the author's name. Display it in the format:

```
"The only limit is your mind." - John Doe
```

Let me know if you want the same tasks but using **template literals** or more advanced string methods.
